### Electric Vehicle Home-charging Reimbursement

Wheels is excited to announce the new EV Home-charging Reimbursement solution.

From consulting clients on the appropriate reimbursement rate and payout frequency to driver enrollment and ongoing support, Wheels manages and oversees the entire reimbursement process. In addition, clients will have full visibility into all their vehicle electrification expenses via FleetView™.

Coupled with the EcoWheels EV Assessment Tool and Qmerit's home-charger installation capabilities, clients now have a suite of solutions for their home-charging needs.

“ EV charging is similar to traditional gasoline fueling when it comes to expensing. Completing the paperwork and tracking total expenses can be a time-consuming process. Our solution reduces that administrative complexity to keep our clients and their drivers productive. ”

— Sara Sweeney  
Senior Product  
Manager
