At-home EV Charging Technology with Qmerit

Wheels is pleased to announce we have partnered with Qmerit, a leader in green energy transformation, to deliver electrification technology to help our clients fulfill their employees' residential electric vehicle (EV) charging needs.

The partnership incorporates Qmerit's U.S. Charge@Home fleet solution into EcoWheels' EV Assessment and ordering process, eliminating the need for organizations to assess, locate and pay for their charging installation.

“ In many ways, the future of EVs is dependent on at-home charging technology. According to a McKinsey report, EV owners with access to home charging will have 75% of their EV energy needs fulfilled. Through this partnership, we bring relief to the range anxiety that may restrict organizations from realizing their EV program goals. ”

— Laura Jozwiak
Senior vice president of sales and client relations
and executive chair of the Environmental Social
Corporate Governance (ESG) program
Wheels

“ Being at the forefront of the Charge@Home electric vehicle movement puts Qmerit in a unique position to help fleet owners achieve their carbon reduction goals through a structured, predictable process. Through our collaboration with Wheels, we are excited to bring their fleet customers across the country into the age of electrification. ”

— Ken Sapp
SVP of business
