

FleetView Enhanced Reporting: Available for Accident Occurrences

Over the past year, Wheels has greatly expanded our reporting tools and functionality. The latest Accident Occurrences Dashboard represents these best practices, views and reporting.

Based on feedback, we continue to optimize and expand our newest reporting tools. Over the next few weeks, we will retire the majority of our legacy Accident Management Reports.

Accident Occurrences Dashboard

- Monitor accident-related metrics, including crash rates and accidents per million miles
- Use accident trends, such as time of day and accident driver role, to highlight opportunities to enhance your safety program or adjust your fleet policy
- Customize detailed accident reports to share with relevant stakeholders, Risk, HR or your insurer

With the introduction of the new dashboard above, we are ready to transition from our legacy Accident Management Reports.

Helpful Resources

A user guide for this new dashboard is posted in the FleetView Help Center. A member of your Wheels Account Team can help you set up new report schedules or configure reports.

Please reach out to a member of your Wheels Account Team with any questions or send feedback to FleetViewFeedback@Wheels.com. We'd love to hear what you think!
