

## PRODUCT UPDATE

## Fleet Requests in FleetView Mobile

Wheels is pleased to announce the integration of two of our most popular operational efficiency tools: Fleet Requests and FleetView<sup>™</sup> Mobile.

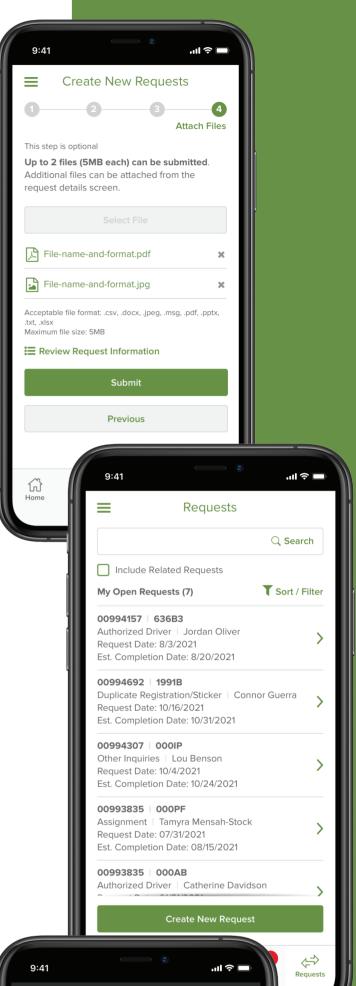

Fleet Requests functionality provides a complete view into the activities Wheels is working on your behalf. And FleetView Mobile offers actionable insights into key fleet activity while on-the-go.

Now, Fleet Requests has been integrated into FleetView Mobile, providing the following functionality:

- View the status of open and recently closed requests, including estimated completion dates, descriptions, and comments.
- Create new requests for commonly requested items.
- Snap a picture of a required document on your phone and attach it to a new or existing request.

## That's not all!

We've made additional enhancements to the FleetView Mobile app. FleetView Mobile now has the option for Dark Mode to better support viewing preferences. We've also added more data points into the details when viewing an individual vehicle or contact.

## **Download FleetView Mobile**

If you haven't already, download the FleetView Mobile app from the Apple or Android store to check in on your fleet's activity while on-the-go. Simply download and log in with your existing FleetView

An updated FleetView Mobile user guide is located in the FleetView Help Center.
