

New ADAS Driver Training Modules

Wheels is pleased to announce six new driver training modules. Newer vehicles offer a more robust slate of safety-related capabilities than ever before. Training drivers on how to fully understand and correctly use these features can lead to fewer incidents and accidents.

The six new modules focus on Advanced Driver Assist Systems (ADAS), and are as follows:

- The Importance of the Driver as the Most important Safety Feature
- Back-up Cameras
- Blind Spot Monitoring Systems
- Lane Departure Warning Systems
- Forward Collision Warning Systems
- Adaptive Cruise Control

If you have questions about the new ADAS training modules, please contact a member of your Wheels Account Team.
